

## Statement on Arsenic Content in Ventec Products

Arsenic compounds are often used to roughen the matte side of copper foil to improve the adhesion to dielectric. This would result in trace residue on the copper foil. Except copper foil, other constituent parts in Ventec products don't contain any substance related to arsenic.

According to the hazardous substances test reports completed by an independent certified laboratory, the arsenic content in all Ventec CCL products, using any of our approved copper foil suppliers products is below 100ppm.

We hereby declare that Ventec products meet all the requirements pursuant to Article 59(10) of the REACH Regulation (EC) No 1907/2006 (REACH Regulation) legislation including the limitation of arsenic content.

Sincerely,

Ventec Electronics
