

Declaration of PFAS

Dear Customer,

Per-and Polyfluoroalkyl Substances (PFAS), it means substances containing at least one perfluorinated methyl (CF₃-) or methylene (-CF₂-) carbon atom (without any H/Cl/Br/I).

Here Ventec confirms that, except tecspeed 30.0 series (VT-3703/VT-3706/VT-6702/VT-6710/VT-6735/VT-6880) use PTFE material (CAS No. :9002-84-0) , all the other products do not use Per-and Polyfluoroalkyl Substances (PFAS).

Although PTFE is a fluorinated compound which classified in PFAS, it has not yet been included in the PFAS category substance restriction regulations (such as REACH,RoHS, POPs, etc).

In addition, the small amount of fluorine (CAS No.:7782-41-4) detected in VENTEC FR4 products is derived from fluorite(CAS No.:14542-23-5), one of the mineral raw materials of glass yarn, which is inorganic fluorine and does not exist as an independent substance and is not derived from PFAS compounds.

So, all the Ventec products do not contain the PFAS substances restricted by laws and regulations.

If you have any questions, please contact our local representative.
